

DHS vehicle barriers are suitable for applications requiring a higher level of security than a standard barrier, while being faster and more cost effective than gates. Suitable for applications where continuity of fence lines are required and for deterring unauthorised pedestrian access.

FEATURES

BENEFITS

Stainless steel construction

Guaranteed quality, built to last and corrosion resistant

Rigid aluminium lattice

Lightweight and robust deterrent to unauthorised personnel

Standard control panel

Will interface with a variety of access control systems

100% rated duty cycle

Guaranteed reliability for continuous operation

Variable operational speeds

Speed tailored to suit type of application

Beam held securely in closed position

Greater security

Beam length of up to 5.5 metres

Controls larger entrances

Quick installation

Saves time and minimises disruption

Safety devices

Unit readily accepts all types of safety device, including buffers, induction loop and infra-red beams
