

DSG gate automation systems are suitable for any size gate. Automatic gates can be interfaced with most control devices keeping entrances and areas secure, allowing authorised access.

Selecting the correct operator for the application ensures that cost and requirements are matched. Using operators of the highest quality, a reliable installation is achieved. Gates are locked securely via drives and optional magnetic locks.

FEATURES

BENEFITS

Heavy duty gate operators

Designed for commercial applications

3 different capacity operators

Operators matched to gate requirements. Operators available to drive the biggest gates

Locking

Gates are held firmly closed by the operators and with additional magnetic locks for large, heavy gates

Control Panel

Standard control panel used throughout the range of products fully programmable to your exact requirements

Manual release

Gates can be manually released in the event of power failure

Safety

Control panel will readily accept all types of safety device, including buffers, induction loops and infra-red beams
