

The HRK road blocker provides a high level of security at all times, being manufactured to withstand repeated impact and still operate. Specified for its strength and reliability, this road blocker consists of a hydraulically driven reinforced steel barrier which lies flush to the road surface and rises to a height of 340, 540, 650 or 800mm (depending on the specification) when activated.

Strong and durable, these road blockers can be operated by site security or individual drivers through a choice of access control systems. The HRK road blocker is guaranteed for 5 years against light vehicle impact.

FEATURES

BENEFITS

Manufactured to exceed BS6571 and welding to BS4872

Built to last giving a guaranteed quality product

Raised and lowered in approx 2-5 seconds

Optional extra fast operation for rapid deployment

Tested to 20 tonnes axle weight

Suitable for HGV environment

Micro-Processor Logic Controls

Flexible methods of operation to suit all applications

Range of safety devices

Increased user protection

Vandal resistant

Almost impossible to tamper with the system

Designed to withstand light vehicle impact

Damage repairs to this unit are minimal

Directional traffic lights system

Indicates safe passage for vehicles
